Art Unit: 1616

I. Rejections of claims under 35 U.S.C. 112, 1st and 2nd paragraph will not be maintained. How to make and use derivatives is disclosed in the specification. Examples of derivatives are also disclosed in the specification. See paper no. 13.

Claim Rejection under 35 U.S.C. 103(a)

II. Applicant's arguments with respect to claims 1-32 have been considered but are moot in view of the new ground(s) of rejection.

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Crudden (US 5985798; 11/16/99) and Magin et al (US 5710103; 1/20/98). Crudden teaches a method of enhancing the herbicidal activity of glyphosate comprising adding to glyphosate a N-acyl sarcosinate. The herbicidal mixture is used in a method to control weed growth in crops. See abstract, column 1 lines 57-67, claim 1. Crudden does not teach the method comprising a quaternary ammonium surfactant. However, Magin teaches a method of applying to crop a herbicidal composition comprising glyphosate, C8-22 alkyl dimethyl amine oxide (tertiary amine) and a quaternary ammonium surfactant having 8-40 carbon atoms. See abstract, column 2 lines 43-63, claims 1,6. It would have been obvious to one having ordinary skill in the art to combine the prior art compositions. One would have been motivated to do this in order to enhance the

Art Unit: 1616

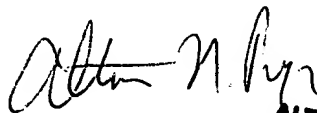

activity of glyphosate. With respect to the amounts / ratios of ingredients, one having ordinary skill in the art would have been expected to determine the optimum amounts / ratios of ingredients through routine experimentation. One would have been motivated to do this in order to develop the most effective composition for controlling weed growth.
